Chapter-1

INTRODUCTION

1.1 GENERAL

Bangalore is the capital of Karnataka. It is located on the Deccan Plateau in the south- eastern part of Karnataka. Bangalore is India's third most populous city and fifth-most populous urban agglomeration. Bangalore is well known as a hub for India's Information Technology sector. It is among the top 10 preferred entrepreneurial locations in the world Bangalore is sometimes referred to as the "Silicon Valley of India" (or "IT capital of India") because of its role as the nation's leading information technology (IT) exporter. Indian technological organizations ISRO, Infosys, Wipro and HAL are headquartered in the city. A demographically diverse city, Bangalore is the second fastest-growing major metropolis in India.

1.2 GEOGRAPHY

Bangalore lies in the southeast of the South Indian state of Karnataka. It is in the heart of the Mysore Plateau (a region of the larger Precambrian Deccan) at an average elevation of 900 m (2,953 Ft.).It is located at 12.97°N 77.56°E and covers an area of 741 km2 (286 sq mi).The majority of the city of Bangalore lies in the Bangalore Urban district of Karnataka and the surrounding rural areas are a part of the Bangalore Rural district. The topology of Bangalore is flat except for a central ridge running NNE-SSW. The highest point is Vidyaranyapura Doddabettahalli, which is 962 m (3,156 ft) and lies on this ridge. No major rivers run through the city, though the Arkavathi and South Pennar cross paths at the Nandi Hills, 60 km (37 mi.) to the north. River Vrishabhavathi, a minor tributary of the Arkavathi, arises within the city at Basavanagudi and flows through the city. The rivers Arkavathi and Vrishabhavathi together carry much of Bangalore's sewage. A sewerage system, constructed in 1922, covers 215 km² (133 mi²) of the city and connects with five sewage treatment centers located in the periphery of Bangalor.

1.3 CIVIC ADMINISTRATION

Scanned with CamScanner

The **Bruhat Bengaluru Mahanagara Palike (BBMP)**, is the administrative body responsible for civic amenities and some infrastructural assets of the Greater Bangalore metropolitan area.[1] It is the

fourth largest Municipal Corporation in India being responsible for a population of 6.8 million in an area of 741 km^2. Its boundaries have expanded more than 10 times over the last six decades. Its roles and responsibilities include the "orderly development of the city" — zoning and building regulations, health, hygiene, licensing, trade and education, as well as quality of life issues such as public open space, water bodies, parks and greenery. The BBMP represents the third level of government (the Central Government and State Government being the first two levels). BBMP is run by a city council composed of elected representatives, called "corporators", one from each of the wards (localities) of the city

1.3.1 HISTORY

The history of municipal governance of Bangalore dates back to 27 March 1862, when nine leading citizens of the old city formed a Municipal Board under the Improvement of Towns Act of 1850 with a similar Municipal Board was also formed in the newer Cantonment area.[3] The two boards were legalised in 1881, and functioned as two independent bodies called the Bangalore City Municipality and the Bangalore Civil and Military Station Municipality (Cantonment). The following year, half of the municipal councillors were permitted to be elected; property tax was introduced and greater powers given over police and local improvement.

After Indian independence, the two Municipal Boards were merged to form the Corporation of the City of Bangalore in 1949, under the Bangalore City Corporation Act. The corporation then consisted of 70 elected representatives and 50 electoral divisions and the office of Mayor introduced for the first time. The first elections were held in 1950.

The name of the council changed — first to Bangalore City Corporation (BCC) and then to Bangalore Mahanagara Palike

In 1991 the BMP expanded to include 87 wards in 1991 and 100 wards in 1995. The council also included 40 additional members drawn from the parliament and state legislature.

Scanned with CamScanner

In November 2006, the BMP Council was dissolved by the state government upon the completion of its five year term. In January 2007, the Karnataka Government issued a notification to merge 100 wards of the erstwhile Bangalore Mahanagara Palike with seven City Municipal Councils (CMC)s, one Town Municipal Council (TMC) and 111 villages around the city to form a single administrative

area.[4] The process was completed by April 2007 and the body was renamed 'Bruhat Bangalore Mahanagara Palike'(Greater Bangalore Municipal Corporation).

1.3.2 ZONES

BBMP is divided into Eight zones, for the ease of administration each administered by a Zonal Commissioner: Every zone has a Joint Commissioner, who is answerable to the BBMP commissioner. The decentralization hasn't been very effective in addressing the problems in administration. The end of 2013 saw discussions in various circles about dividing BBMP into more parts.

1.3.3 ROLES AND RESPONSIBILITIES

The Bruhat Bangalore Mahanagara Palike is the fourth largest Municipal Corporation in India, after the city corporations that administer Mumbai, Delhi and Chennai. The BBMP is responsible for infrastructural assets of the Greater Bangalore Metropolitan area, spread across 741 km^2, with a population of 6.8 million.

Its roles and responsibilities include the "orderly development of the city "zoning and building regulations, health, hygiene, licensing, trade and education, as well as quality of life issues such as lung spaces, water bodies, parks and greenery

1.3.4 Project Background

Bruhat Bengaluru Mahanagara Palike (BBMP) is desirous of obtaining consultancy services for the preparation of Design Report for roads & Drains. BBMP has taken up a programme of Comprehensive Development of Roads & Drains in LG Ramanna Layout, Freedom Fighter Colony, Narasimha Swamy Layout and Surrounding areas in W No.69 under PACKAGE- 2022-23 RRN-DIV-(12).The growth in vehicular traffic in this area and associated activities necessitates the widening of the

Scanned with CamScanner

project road to adequate width , since the ward and area located is ongoing development with UGD and Water line the development is most necessary with road and Drainage.

M/S Civil Quality Consultants & Engineers has been appointed as a consultant to perform the services. This Report deals with the approach, methodology, investigation details of project roads and the role of Consultants.

1.3.5 Loaction and Teerain Condition

The Project road lies under Rajarajeshwari Nagara Constituency Ward 160 Under RR Nagara Sub Division

INVESTIGATION & SURVEYS

2.1 GENERAL

A site investigation is the process of the collection of information, the appraisal of data, assessment Site investigation is carried out in order to enable a geotechnical and geo-environmental assessment of the road conditions and analysis of the engineering and environmental considerations related to the proposed development. Subsurface condition at a road may be relatively uniform or extremely variable and will largely determine the complexity of the problems to be faced in both design and construction. The subsurface investigation must therefore be of sufficient extent to provide enough information for a thorough understanding of the interaction of proposed work

The basic aim of field investigation and analysis is to identify technically and economically feasible solution to improvements / widening of the existing road, if any. These improvements include the formulation of suitable cross section through widening / improvements to the existing pavement drain system, footpath and facilities to the road users. The various engineering surveys/investigations of the road sections include

- Reconnaissance Survey
- Visual Topographical Survey
- Road Inventory Survey
- Pavement Condition Survey.
- Road signs, safety devices
-

2 .1.1 RECONNAISSANCE SURVEY

Reconnaissance Survey of the road, considered for improvements, has been carried out to identify the general condition of roads, drains, culverts and bridges for further surveys/investigations, to understand kind of establishments along the stretches of roads and to work out land acquisition scheme. Making use of the observations / data collected during reconnaissance survey, detailed schedule for surveys/ investigations required for the project has been finalized.

2.1.2 VISUAL TOPOGRAPHICAL SURVEYS

A Topographic Survey is a survey that gathers data about the elevation of points and presents them as contour lines on a plot. The purpose of a topographic survey is to collect survey data about the natural

Scanned with CamScanner

and man-made features of the land, as well as its elevations. Topographic maps are used to show elevations and grading features for architects, engineers, and building contractors Topographic Survey has been conducted all along the corridor by physically measuring the Road Width, Footpath Width, Drain Width, and Alignment of Road and with the aid of Google Maps.

2.1.3 Road Inventory Survey

A detailed inventory and condition survey of road sections has been carried out by making use of well structured inventory data format. It was compiled in tabular form, developed using Excel computer software. Various data collected during the road inventory broadly include

- ✓ Type of terrain.
- ✓ Land use.
- ✓ Carriageway width.
- ✓ Type of surfacing.
- ✓ Shoulder, Median, Drain (Tertiary / Secondary), Footpath-type and width.
- ✓ Road Geometry.
- ✓ Road Furniture.
- ✓ Salient Buildings & Structures.
- ✓ Road Intersection(s) and their details.
- ✓ Land width (ROW).
- ✓ Culverts, bridges and other structures (type, size, span arrangement and location).
- ✓ General drainage conditions.

2.1.4 PAVEMENT CONDITION SURVEY

The visual survey is conducted and various details of the existing pavement are recorded.

- ✓ Pavement condition (extent of potholes, cracks, rutting, evenness, etc.)
- ✓ Shoulder condition (surface, potholes, height above or below carriageway, evenness)
- ✓ Side drain (type, condition)
- ✓ To assess the condition and strength data for developing improvement proposals and related designs

2.1.5 Road signs, safety devices

Road signs give information about the road conditions ahead, provide instructions to be followed at the major crossroads or junctions, warn or guide drivers, and ensure proper functioning of road traffic. Being unaware of road signs is akin to throwing caution to the wind. It can lead to loss of life and property The provision of Road Signs, Pavement Markings, Safety Barriers, Railings, Delineators, Chevron Markings, and Traffic Attenuators are made in the Detailed Estimate.
